4 Revision History **4**

1 General

The standard service package consists of a test set, a computer and interface cables. A hardlockis required for security reasons.

2 Hardware

All test hardware must be approved by Ericsson and is documented in the Equipment List.

2.1 Test set

A test set approved according to the Instruments List must be used.

Test set installation according to the instrument manufacturer instructions.

Test script software and options according to the Instruments List must be present.

2.2 Antenna cable

Connect the antenna cable between the RF-port of the instrument and the antenna connector.

2.3 Computer

IBM compatible computer with Windows 95, Windows 98 or Windows NT.

2.4 Hardlock

Hardlock with article number KRY 105 165 is required. The hardlock should be connected to the parallel port.

2.5 Service cable

Connect the service cable to one of the serial ports on the PC and to the system connector according to the figure below.

2.6 IR test eye

Install according to the manual supplied with the IR test eye.

3 Software

No repair shell is required.

3.1 Emma shell

1. Download Emma shell if not already installed and all R320 software into an empty directory.
2. Start the downloaded EXE file from Windows RUN option, the software will now self-extract into more files.
3. Start SETUP.EXE in the temporary directory from Windows RUN option.
4. There will be on-line instructions during the installation.
5. The software is installed in the proper shell under the flash directory.
6. Erase all files in the temporary directory

The Software is self-instructing and gives on-line instructions if needed.

Test Setup

Standard installation
